

ProteusDS Workshop @ Mari-tech 2018

DSA believes training is at the core of our customer's success; we want our clients to reach their goals, amaze their customers, and transform their business with the power of dynamic analysis.

Join DSA for a unique ProteusDS workshop in conjunction with Mari-Tech 2018 at the Victoria Conference Centre in Victoria BC where we will explore:

The new **thruster model** that is used for assessing global performance of vessel motion.

The new **cable state generator**, which makes it much easier to create segments, create initial conditions, and assign element properties for cables. It also allows you to remesh a cable very quickly – adding resolution to the part of your model that needs it – through specification of the number of elements in each segment.

Other topics might be explored depending on demand.

When: April 8th, 2018

Time: 9am -12pm

Where: Victoria Conference Center, - Mari-Tech 2018

What's included?

Coffee and continental breakfast

A ProteusDS license for the duration of the training session

Registration:

Regular: \$300 CDN

Academic: \$150 CDN

Who should attend?
